About Me

I'm a Full Stack Software Engineer with roots in enterprise infrastructure, from network administration to managing production systems at Bank Mandiri. Years of watching software failures cascade into business-critical downtime made one thing clear, that great systems start with great code. That conviction drove me to pivot into full-stack development through RevoU's intensive bootcamp, where I built production-ready applications with TypeScript, Next.js, Nest.js, and PostgreSQL. I aim to apply my infrastructure instinct, full-stack engineering skills, and deep appreciation for system reliability to engineering teams building products that need to perform as well in production as they do in the pitch deck.

Education

Gunadarma University

Aug 2014 - Jul 2019

Bachelor Degree of Computer System | GPA: 3.38

- [Thesis](#) : Design of IoT Based Excavator Robot Prototype Using the Raspberry Pi 3 B and Raspberry Pi Camera Module.

Revou

Jun 2025 - Jan 2026

Full Stack Software Engineering Learning Bootcamp

- [Final Project](#) : RevoHotel (Hotel Booking Website)

Working Experiences

IT Support Technician | PT Megariamas Sentosa

Jul 2023 - Present

- Diagnosed and resolved complex hardware, software, and network issues across corporate environments, consistently minimizing technical downtime and maintaining end-user productivity.
- Established structured maintenance routines for corporate laptops and desktop PCs, reducing recurring technical incidents through proactive servicing and system configuration.
- Administered and maintained corporate network infrastructure, including switches, routers, and access points to ensuring stable and secure connectivity across the organization's operational environment.
- Overhauled IT inventory documentation system to improve asset lifecycle visibility and streamline software deployment tracking across the organization.

System Engineer | PT Berca Hardayaperkasa

Jan 2022 - Dec 2022

- Maintained high availability of core enterprise systems within Bank Mandiri's production environment by continuously monitoring real-time performance metrics and resolving degradation before user impact occurred.
- Ensured business continuity of Bank Mandiri's automated robot systems through rigorous operational maintenance and rapid troubleshooting of critical failures.
- Strengthened incident response workflows by leading timely escalation of critical infrastructure issues to specialized engineering teams, minimizing operational disruption across production services.
- Delivered structured performance analytical reports that provided engineering and management teams with actionable visibility into system health trends.

IT Support | PT Swalayan Sukses Abadi (The Foodhall)

Jul 2020 - Jun 2021

- Maintained uninterrupted IT operations across 2 supermarket branches by providing end-to-end infrastructure support covering networks, hardware, software, CCTV, and digital scales.
- Resolved multi-site network and hardware failures through systematic troubleshooting, ensuring minimal downtime across store operations.
- Strengthened data integrity by designing and implementing automated database backup strategies, eliminating the risk of transactional data loss across both branches.
- Sustained system performance during high-load stock inventory audits by proactively identifying and resolving network bottlenecks, ensuring seamless data collection continuity.

Project Experiences

RevoHotel (Hotel Booking Website)

Dec 2025 - Jan 2026

Live-Demo : [Revohotel](#)

Architected and developed RevoHotel, a modern, full-stack hotel booking platform utilizing Next.js, React Server Actions, and TypeScript to deliver a high-performance, SEO-optimized, and highly responsive user experience. Designed a relational PostgreSQL database schema using Prisma ORM, utilizing Prisma to handle database writes atomically, and established secure role-based access control for guest and admin portals via Auth.js integration. Integrated the Midtrans Payment Gateway API to securely process

transaction, and engineered dynamic room booking workflows with conflict resolution to dynamically block unavailable date ranges.

Additional Information

Technical Skills:

- **Programming Language** : JavaScript, TypeScript
- **Front End Framework** : React (via Next.js)
- **Back End Framework** : Nest.js
- **Database** : PostgreSQL, MySQL, Microsoft SQL Server
- **Testing Framework** : Jest
- **Styling Framework** : Tailwind CSS
- **Cloud & Deployment** : Railway, Netlify
- **Tools** : Docker, Postman, PrismaORM
- **Operating System** : Windows, MacOS, Linux
- **Others** : Network Administration, Troubleshooting

Soft Skills : Accountability, Continuous Learning, Adaptability, User-Centric Problem Solving.

Languages : Indonesia, English
